unphased

- Built a full-stack app with React (front end), Node.js/Express (back end), and PostgreSQL on AWS, integrating Auth0 for secure user authentication and persistent user data.
- Implemented RESTful APIs to connect front-end components with the database, handling cycle insights, mood tracking, and personalized workout/diet recommendations.
- Collaborated in a small team and delivered a working MVP under a tight deadline and won the “Best Use of Auth0” category
- [Link to project](#)

HoosFunding

- Full-stack Web Application for Faster, More Transparent Funding Decisions
- Built a responsive React/TypeScript portal with Node.js/Express backend to centralize and prioritize student/department funding requests, addressing 3–4 month wait times and unclear denial reasons.
- [Link to project](#)

“Track My Study”

- Built a Java-based GUI application combining a music player and digital notes tool aimed at improving productivity for students.
- Designed and implemented the front-end using Java Swing, focusing on clean layout, intuitive controls, and responsive UI elements.
- Used a linked list to handle dynamic track switching, enabling efficient playlist navigation and playback control.
- Integrated the Java Sound API and third-party libraries to support MP3/WAV playback with user-interactive features like pause, skip, and volume adjust.

Henna Hut Website

- Designed and developed the Henna Hut website using HTML5 and CSS3, implementing a responsive layout and custom styles. Used Figma to prototype the site’s structure and user interface prior to development.
- Designed and prototyped the front-end using Figma and Adobe Illustrator, creating a custom visual identity and layout tailored for a beauty services brand.
- Developed and connected a functional form-based booking system using Formspree, enabling backend data collection without server-side code.
